[1.0] INTRODUCTION

The Blue & Gray Game System is an operational simulation of warfare during the American Civil War era. Each game in the system represents one of the great battles in the period. The Playing Pieces represent the actual units which participated in the battles, and the Map represents the terrain over which those units fought.

Two rules folders are provided. The first contains Standard Rules, which are common to all the games in the Blue & Gray system. The second folder contains Exclusive Rules for the game you have purchased, and Initial Deployment and Reinforcement Rules for this game only.

This game has been designed to insure maximum playability and maximum reality (in that order). In order to achieve these goals, the physical components, as well as the game rules, have been designed to make the game easier to understand and play. The components include a smaller, more compact playing map, never more than a hundred playing pieces, and standardized rules.

The standardization makes it easier for the gamer to go from one game to another within the series. It also enables the games' designers to concentrate on the realism aspects of the games. (The standardization generally takes care of any playability problems.)

[2.0] GAME EQUIPMENT

[2.1] THE GAME MAP

The 22" x 17" mappsheet portrays the area in which the battle was fought. It includes all the significant terrain in the battle. It also displays a variety of Charts and Tables which assist play.

A hexagonal grid is superimposed over the terrain features printed on the mappsheet in order to regularize movement and positioning of the playing pieces.

To make the map lie flat, back-fold it against the creases. Small pieces of masking tape may be used at the corners of the map to hold it flat.

[2.2] GAME CHARTS AND TABLES

Various visual aids are provided for the players in order to simplify and illustrate certain gaming functions. These are the Terrain Effects Chart, the Combat Results Table, the Reinforcement Chart and the Deployment Chart.

[2.3] THE PLAYING PIECES

The cardboard pieces represent the actual military units that took part in the original battle. The numbers and symbols on the pieces represent the strength, movement capability, and type of unit represented by that piece. These playing pieces will hereafter be referred to as "units."

[2.4] HOW TO READ THE UNITS

Unit Designation

Unit Type

Unit Designations
Confederate units are identified by their commander's name. Union units are identified by numerals in this sequence: brigade/division/corps (roman numeral). Example: "2/3/IV" is the 2nd Brigade of the 3rd Division, 4th Corps.

Unit Types

Infantry
Cavalry
Artillery

Unit Sizes

111 = Regiment
XX = Division
X = Brigade
XXX = Corps

Combat Strength is the relative strength of a unit when attacking and defending, expressed in terms of Strength Points.

Movement Allowance is the maximum number of clear terrain hexes which a unit may be moved in a single Movement Point; the Movement Allowance for all units is six Movement Points. More than one Movement Point may be expended for each hex entered.

[2.5] GAME SCALE

Each hexagon on the map represents 400 meters of real terrain from side to side. Each Strength Point represents between 250 and 350 men.

[2.6] PARTS INVENTORY

[3.0] SETTING UP THE GAME

The cardboard Playing Pieces should be punched out of the Unit Counter Sheet. The blue colored pieces represent Union forces; the gray colored pieces represent Confederate forces. The mappsheet should be unfolded and then backfolded against the creases to make it lie flat. Players should determine who will be the Confederate Player and who will be the Union Player.

The Players then consult their respective Initial Deployment Charts. These charts tell the number, strength and Designation of each unit which is in play on the map during the first Game-Turn. Players should simultaneously place each of these units in its proper position on the map. All remaining units should be placed aside and brought into play according to the Reinforcement Chart. In setting up units, Players may disregard historical designations, so long as the unit type and strength are correct.

Once the units are set up, Players are ready to commence Game-Turn One; place the Game-Turn Marker in the first position on the Game-Turn Track.

In order to determine which Player is the first Player and which the Second Player, consult the Exclusive Rules folder. There Players will also find rules for bringing in the reinforcement units which are given on the Reinforcement Chart. Play proceeds according to the Sequence of Play through the final Game-Turn.
[4.0] SEQUENCE OF PLAY

The game is played in successive Game-Turns composed of alternate Player-Turns. During each Player-Turn, the Player maneuvers his units and resolves combat in sequence, according to the following outline, and within the limits provided by the rules which follow. At the conclusion of the final Game-Turn, the Victory Conditions are consulted and a winner is determined.

[4.1] SEQUENCE OUTLINE

The Game-Turn is divided into a First Player-Turn and a Second Player-Turn. The Player whose Player-Turn is currently in progress is termed the Phasing Player. The activity which may take place during each Phase is outlined below:

1. **FIRST PLAYER-TURN**
   - **Movement Phase**: The Phasing Player may move all, some or none of his units as he desires within the limits and restrictions of the rules of Movement and Zones of Control, and the Exclusive Rules of the game. The Phasing Player may bring reinforcement units onto the map as allowed by his Reinforcement schedule and the Reinforcement rules. The non-Phasing Player's units may not move.
   - **Combat Phase**: The Phasing Player uses his units to attack the non-Phasing Player's units according to the rules of Combat and Artillery. During this Phase neither Player may move his units except when forced to, as a result of the Combat Resolution procedure.

2. **SECOND PLAYER-TURN**
   - The Second Player now becomes the Phasing Player and accomplishes movement and combat in the manner described above.

3. **GAME-TURN RECORD INTERPHASE**
   - The Game-Turn marker should be advanced one space on the Game-Turn Record Track to mark the passage of one Game-Turn and signal the start of another.

[5.0] MOVEMENT

**GENERAL RULE:**

During the Movement Phase, the Phasing Player may move as many or as few of his units as he desires. They may be moved in any direction or combination of directions.

**PROCEDURE:**

Units are moved one at a time tracing a path of contiguous hexes through the hex grid. As a unit enters each hex, it must pay one or more Movement Points from its Movement Allowance. The Movement Allowance of all units is six Movement Points. Thus, a unit can move through six clear terrain hexes in a single Movement Phase.

**PROHIBITIONS:**

[5.11] Movement may never take place out of sequence. A Player's units may be moved during his own Movement Phase. During the Combat Phase, a unit which is either attacking or defending may be called upon to advance or retreat after its combat is resolved. During the Enemy Player's Movement Phase, and during both Player's Combat Phases, except when advancing or retreating as a result of combat, Friendly units must not be moved.

[5.12] A unit may never enter a hex containing an enemy unit.

[5.13] A unit may never exit an Enemy controlled hex during any Movement Phase. An Enemy controlled hex may be left only during a retreat or advance as a result of combat (see 7.7).

[5.14] No combat takes place during the Movement Phase. Once a Player has begun to resolve combat, and has thrown the die, he has irreversibly initiated the Combat Phase.

[5.15] The number of Movement Points expended by a unit during a single Movement Phase may not exceed the Movement allowance. A unit may expend any portion of the Movement Allowance, but unused Movement Points may not be accumulated until another Movement Phase or transferred to another unit.

[5.16] Movement from hex to hex must be consecutive; that is to say, a unit may not skip hexes.

[5.17] Once a unit has been moved, and the player has had a chance to read the result, it may not be moved any further during that Movement Phase, nor may it change its move without the consent of the opposing Player.

[5.2] EFFECTS OF TERRAIN

[5.21] A unit must expend one Movement Point to enter a clear terrain hex. To enter other types of terrain, a unit must often expend up to six Movement Points. And some hexes are prohibited to movement entirely. See 9.0, Terrain Effects Chart.

[5.22] A unit which moves from one road hex directly into an adjacent road hex through a road hexside expends only one Movement Point, regardless of other terrain in the hex.

[5.23] A unit which moves from one trail hex directly into an adjacent trail hex through a trail hexside expends two Movement Points if the hex being entered contains forest and/or rough terrain. If the hex being entered contains clear terrain, the unit expends only one Movement Point.

[5.24] Units may never enter river hexes. They may cross rivers only by moving through river ferry hexes. Units may never end their movement in a river ferry hex. They may enter a river ferry hex only if they retain sufficient Movement points to enter the river ferry hex and the hex on the opposite bank in the same Movement Phase, and may only enter and exit through the hexsides to which the arrow indicators point.

[5.25] Units may never cross creek hexsides. They may cross creeks only by moving through bridge or ford hexes. There is no additional cost for moving through a bridge hexside. Movement through a ford hexside costs one additional Movement Point. Example: If a unit moves through a ford hexside into a forest hex, the cost is four Movement Points.

[5.3] EFFECTS OF FRIENDLY UNITS

[5.31] A Friendly unit may move through hexes occupied by other Friendly units. There is no additional cost for entering a Friendly-occupied hex.

[5.32] A Friendly unit may end any Phase stacked in the same hex with one other Friendly unit. That is, a maximum of two units (regardless of strength or unit type) may be stacked in a single hex.

[5.33] There is no limit to the number of Friendly units which may pass through a single hex in one Movement Phase.

[5.34] Friendly controlled hexes never inhibit the movement of Friendly units.

[6.0] ZONES OF CONTROL

**GENERAL RULE:**

The six hexagons immediately surrounding a hex constitute the Zone of Control of any units in that hex. Hexes upon which a unit exerts a Zone of Control are called controlled hexes and inhibit the movement of Enemy units. All units must cease movement when they enter an Enemy controlled hex.

[6.1] All units exert a Zone of Control throughout the Game-Turn, regardless of the Phase or Player-Turn. The presence of Zones of Control is never negated by units, Enemy or Friendly.

[6.2] Units do not pay any additional Movement Points to enter an Enemy controlled hex, as in some other SPI games.

[6.3] There are only two ways to exit a hex in an Enemy Zone of Control: Either by retreat or advance as a result of combat, or by removal of the Enemy unit exerting the Zone of Control as a result of combat.

[6.4] Obviously, if a given unit is in an Enemy controlled hex, the Enemy unit is also in its controlled hex. The two units are equally and mutually affected.

[6.5] If there is an Enemy and Friendly Zone of Control exerted over the same hex, both Zones co-exist, and that hex is mutually controlled by both Players. There is no additional effect from having more than one unit exerting Zones of Control onto a single hex.

[6.6] Zones of Control always extend into all six hexes adjacent to the controlling unit's hex, with this exception: Zones of Control never extend through non-bridge and non-ford creek hexides or into River Ferry hexes.

Example:

![Diagram of Zones of Control]

[7.0] COMBAT

**GENERAL RULE:**

Combat between adjacent opposing units is mandatory. Artillery units (6.0) are the only units which may attack units to which they are not adjacent. The Phasing Player is termed the Attacker; the other Player is the Defender, regardless of the overall situation.

**PROCEDURE:**

The Attacker totals the Combat Strengths of all the units attacking a given hex and compares the total to the total Combat Strengths of the defending units in the hex under attack. The comparison is expressed as a ratio between attacking and defending Strength Points (attacking Strength Points divided by defending Strength Points) and is simplified by rounding down to one of the odds ratios on the Combat Results Table. Example: if thirteen Strength Points were attacking four, the combat odds ratio would be 3.25 to 1, rounded off (always in favor of the defender) to three to one.

Having determined the actual combat odds, the attacker rolls the die. The result indicates a line on the Combat Results Table (7.6), which is cross-indexed with the column representing the combat odds. The intersection of line and column yields a
combat result. This should be immediately applied to the involved units, before going on to resolve any other combat. Separate combats may be resolved in any order that the Attacker wishes, so long as all combats are resolved during that Combat Phase.

[7.1] WHICH UNITS ATTACK

[7.11] All Enemy units that have Friendly units in their Zones of Control must be attacked by the Friendly (Phasing) Player’s units in the Combat Phase. Hence, even if these attacks in any fashion desired, as long as all adjacent units are attacked, within the requirements of 7.2.

[7.12] All of the Phasing Player’s units which end the Movement Phase in an Enemy controlled hex must attack some Enemy unit during the ensuing Combat Phase. The Phasing Player may choose which attacking units will attack each defending unit, as long as all adjacent Friendly units participate in an attack.

[7.13] An Enemy-occupied hex may be attacked by as many units as can be brought to bear on six adjacent hexes, and by as many artillery units as are within range (see 8.0).

[7.14] No unit may attack more than once per Combat Phase, and no Enemy unit may be attacked more than once per Combat Phase.

[7.15] Units may only attack when adjacent to the defending unit (exception: see 8.0).

[7.2] MULTIPLE UNIT AND MULTI-HEX COMBAT

[7.21] All units defending in a given hex must be attacked as a single strength. The defender may not withhold a unit in a hex under attack. The attacker must attack all the units in a stack together; the Strengths of all the units in the hex are totalled, and this total Strength is attacked. Different units in a given hex may not be attacked separately.

[7.22] If more than one attacking unit is in a given hex, these units must be used as an integral Combat Strength. They may not be used in separate attacks.

[7.23] If a Phasing Player’s unit is in the Zone of Control of more than one Enemy unit, it must attack all those adjacent Enemy units which are not engaged by some other attacking unit.

[7.24] Units in two or more different hexes may combine their Combat Strengths and attack a single hex, if all the attacking units are adjacent to (or within range of) the Enemy occupied hex.

[7.25] Attacks may involve any number of attacking or defending units on different hexes. For the attacks to be resolved as a single combat, however, all the attacking units must be adjacent to all the defending units, with the addition of bombarding artillery units, which need not be adjacent.

[7.3] COMBAT STRENGTH UNITY

A given unit’s Combat Strength is always unitary; it may not be divided among different combats either in attacking or defending.

[7.4] EFFECTS OF TERRAIN

Units defending in certain types of terrain may have their Combat Strength increased. This increase is always a multiple of the original Combat Strength. Example: a unit with a Combat Strength of “5” would defend, on a Rough Terrain hex, at an effective Strength of “10”. See the Terrain Effects Chart (9.0) for a complete summary.

[7.5] DIVERSIONARY ATTACKS

A unit may make attacks at poor odds in order that adjacent attacks against other defenders may be made at higher odds (by allotting most of the attacking force to the major objective). These attacks are known as “Diversionary” or “Holding Attacks”.

[7.6] EXPLANATION OF COMBAT RESULTS

(See Exclusive Rules Folder)

A = Attacker Eliminated. All Attacking units are eliminated (remove from the map).
D = Defender Eliminated. All Defending units are eliminated.
E = Exchange. All Defending units are eliminated. The Attacking Player may eliminate Attacking units whose total printed (face value) Combat Strength at least equals the total printed Combat Strengths of the eliminated Defending units. Only units which participated in a particular attack may be so eliminated.
Ar = Attacker Retreats. All Attacking units must retreat one hex (see 7.7).
Dr = Defender Retreats. All Defending units must retreat one hex.

[7.7] RETREATING AND ADVANCING AS A RESULT OF COMBAT

[7.71] When the Combat Result requires that a Player’s units be retreated, the Owning Player must immediately move those units one hex so that they are no longer in an Enemy controlled hex. The Owning Player may decide the direction that each of his retreating units moves. Two units in the same hex may retreat in two different directions.

[7.72] A retreating unit may not retreat into a prohibited hex, cross a prohibited hexside, or enter an Enemy controlled hex. If no hex is open to retreat into, the unit is eliminated.

[7.73] A retreating unit may enter a vacant hex (within the restrictions of 7.72) or it may stack with some other Friendly unit (within the stacking restrictions) so long as the unit it stacks with is not in an Enemy controlled hex. If there is no other alternative, it may displace an adjacent Friendly unit (see 7.8).

[7.74] If a unit is retreated into a Friendly hex which is subsequently attacked by Artillery bombardment, the already retreated unit does not contribute its Combat Strength to the defense (see 7.14), but it does suffer the result of the attack.

[7.75] Whenever a hex is vacated as a result of Combat, one victorious unit which participated in that combat may advance into the vacated hex. This advance may be made regardless of Enemy Zones of Control. The option to advance must be exercised immediately, before any other combat resolution. A unit is never forced to advance. A unit may advance more than one hex as a result of combat. After advancing, units may neither attack nor be attacked that Phase (see 7.14), even if their advance places them next to Enemy units whose battles are yet to be resolved, or who were not involved in combat. However, advances are useful in cutting off the retreat of Enemy units whose combat has not yet been resolved.

[7.76] Only one victorious unit may advance into a vacated hex. If two hexes are vacated as a result of a single combat, the victorious Player may still advance only one unit.

[7.8] DISPLACEMENT

[7.81] If the only hex available to the retreating unit is one which the unit could not normally move into because of stacking restrictions (5.31), then one of the units in the hex must be displaced. The displaced unit is moved back by the Owning Player (as if it were retreating as a result of combat) and its position is taken by the retreating unit. The displaced unit itself may not be forced into Enemy controlled hexes or other prohibited hexes. One retreating unit displaces only one unit in a stack; two retreating units displace two.

[7.82] If the displacement would cause any of the displaced units to be eliminated, the retreating unit is instead eliminated. Displaced units can themselves displace other Friendly units in a sort of chain reaction of displacement, if that is the only permitted path of displacement open to them. A unit may be displaced more than once per Combat Phase, if that is the only alternative. Displaced Artillery units which have not yet engaged in combat, may not fire during that Combat Phase. Units may not displace other Friendly units if they have other paths of retreat open to them.

[7.9] VOLUNTARY REDUCTION OF COMBAT ODDS

Prior to the resolution of any attack, the attacking Player may announce that he wishes to reduce the combat odds of that attack. He incurs no responsibility or penalty by doing this, but he may not change his mind subsequent to the die roll. Example: Attack is computed to be a “S-1” attack. Player announces that he desires a “S-1” attack, and resolves it using that column. Players may wish to do this to avoid excess casualties through exchanges, or to attempt to retreat Friendly units.

[8.0] ARTILLERY

GENERAL RULE:

Unlike infantry and cavalry units, Artillery units may participate in attacks by bombarding the defending unit. Artillery bombards a unit from two or three hexes distance. Artillery units may participate in combat when adjacent to opposing units. In other words, artillery may participate in two types of attack, depending on their distance from the defending unit (adjacent or not). Unlike other units, Artillery units are never destroyed or forced to retreat when bombarding a unit, although they are affected by all combat results when they are adjacent to the unit they are attacking.

PROCEDURE:

Determine the odds of the attack in exactly the same fashion as any other attack. All results are applied in the same fashion, except that bombarding Artillery units (i.e., units firing from a non-adjacent hex) are not affected by combat results. Thus, if an “Exchange” were the result in an attack solely by bombarding artillery, the defending unit would be eliminated, but the bombarding units would not be affected. Of course, other units cooperating with the bombarding Artillery units from an adjacent position (including adjacent Artillery units) would be affected by combat results, and they would suffer the effects of an “Exchange” result.

[8.1] BOMBARDMENT ATTACKS

[8.11] Artillery units may attack non-adjacent Enemy units, up to three hexes distant, but they are never forced to attack an Enemy unit merely because it is in range.

[8.12] Range from the bombarding Artillery unit to the target hex is counted by including the target hex, but not the bombarding unit’s hex.

[8.13] Artillery units may only attack a single Enemy occupied hex when bombarding, except when making a combined attack with infantry or cavalry (see 8.2).

[8.14] If two Artillery units in the same hex are bombarding, they must both bomb the same hex.

[8.15] Artillery attacking from a non-adjacent hex (that is, bombarding) suffer no Combat Results; they are never destroyed or retreated as a result of their own attacks.
[8.16] Bombarding Artillery may voluntarily elect to suffer “Attacker Retreat” if it is the Combat Result.

[8.2] COMBINED ATTACKS

[8.21] Artillery units may attack alone, in concert with other bombarding Artillery units, or in concert with any friendly units which are adjacent to Enemy units within range, adding their bombarding Combat Strength to the attack.

[8.22] If, in a combined attack, Friendly units are attacking Enemy units in more than one hex, the Artillery units need only be within range of one of the defending hexes to add their Bombarding Combat Strength to the attack.

[8.23] When making a combined attack with bombarding Artillery units, infantry and cavalry units always suffer all Combat Results, though bombarding Artillery units do not.

[8.3] LINE OF SIGHT

[8.31] To determine if an Artillery unit may bombard a given hex, lay a straight line from the hex of the bombarding Artillery unit to the target hex. This straight line is the Line of Sight. If any of the hexes intervening between the bombarding hex and the target hex is blocking terrain, the target hex may be missed by that Artillery unit.

[8.32] If the Line of Sight is congruent to a hexside (that is, falling exactly between two hexes) it is blocked only if both hexes adjacent to that hexside are blocking terrain.

[8.33] Hexes containing Forest (with or without Rough) and Town terrain are the only blocking hexes. Rough terrain by itself does not block.

[8.34] The terrain in the target hex and in the hex of the bombarding Artillery does not block the Line of Sight.

[8.35] Artillery units may fire over other units, Enemy and/or Friendly.

[8.4] ADJACENT ATTACKS

[8.41] When in the controlled hex of an Enemy unit, Artillery units must participate in an attack against adjacent Enemy units. When an Artillery unit is in an Enemy controlled hex, it is treated like an infantry or cavalry unit, and may not bombard.

[8.42] When attacking from a controlled hex, Artillery units may attack as many units as they are adjacent to, but may not attack non-adjacent units.

[8.43] Artillery units attacking from a controlled hex must suffer all the Combat Results of their attacks.

[8.44] Terrain does not prohibit artillery attacks into adjacent hexes.

[8.45] An Artillery unit may make a bombardment attack when across a creek hexside from the only adjacent Enemy unit. Any Enemy unit within range could be bombarded, even the adjacent unit across the Stream hexside.

[8.5] DEFENSE

[8.51] Artillery units may never add their Combat Strength to another unit’s Defensive value by bombardment. They may only bombard during their own Combat Phase.

[8.52] When Artillery units are themselves attacked, they suffer all Combat Results in the same manner as other units, even when bombarded by Enemy Artillery units.

[9.0] TERRAIN EFFECTS CHART

(See Exclusive Rules Folder)

[10.0] NIGHT GAME-TURNS

GENERAL RULE:

The tinted Game-Turns on the Turn Record Track are night Game-Turns, and have a different Sequence of Play than day Game-Turns, in which the Combat Phase is omitted.

[10.1] EFFECT ON COMBAT

There is no Combat Phase during a Night Game-Turn, and no combat is allowed. Opposing adjacent units do not engage in combat; they simply remain in place. Artillery units may not bombard during Night Game-Turns.

[10.2] EFFECT ON MOVEMENT

Movement operations during Night Game-Turns are identical to Day Game-Turn Movement restrictions, with one addition. Units may not enter Enemy controlled hexes during Night Game-Turn, nor may units already in Enemy controlled hexes exit them.

[11.0] OPTIONAL RULE: ATTACK EFFECTIVENESS

GENERAL RULE:

Whenever a unit receives a Night Retreat (At) result due to combat, its unit marker is inverted (turned face-down), and it becomes ineffective. It remains ineffective until a Night Game-Turn or, if no Night Game-Turn ensues, until the end of the game. When units are face-down on the map, such units have lost Attack Effectiveness and may only defend.

PROCEDURE:

The backs of the die-cut counters are, of course, blank. Players may wish to pencil in lightly the strength of their units. This will obviate having to look under an Ineffective unit when it is attacked.

[11.1] HOW EFFECTIVENESS IS LOST

Attack Effectiveness is lost by attacking units only, when they suffer a Combat Result of Attacker Retreat. Units only lose Attack Effectiveness when they attack from an Enemy controlled hex. They lose it regardless of whether they moved into the adjacent position or the Enemy did.

[11.2] RESULTS OF LOSS

Ineffective units may not attack, nor may they enter an Enemy controlled hex, until they have recovered their Attack Effectiveness. They may continue to move and defend in a normal manner, and retain a Zone of Control.

[11.3] ENEMY ZONES OF CONTROL

[11.31] If, at the beginning of any Friendly Combat Phase, a Friendly Ineffective unit is in an Enemy controlled hex, either all the Enemy units must be retired in combat so that no Enemy Zone of Control is in the Ineffective unit’s hex, or the Friendly Ineffective unit must retreat according to the rules of Retreat After Combat (see 7.7). This does not allow an Optional Advance by an opposing unit.

[11.32] An ineffective unit which does not begin the Combat Phase in an Enemy controlled hex is not required to retreat as outlined in 11.31, even if (due to advance of Enemy units after combat) the unit is in an Enemy controlled hex at the end of the Combat Phase.

[11.4] RECOVERY OF ATTACK EFFECTIVENESS

The loss of Attack Effectiveness continues for a given unit until the end of any Night Game-Turn. At the end of any Night Game-Turn, all units are immediately flipped face-up and resume, in the following Game-Turn, a full Attack Effectiveness, full Attack Effectiveness.

[12.0] DESIGNER'S NOTES

In designing the Blue & Gray game series, we started with the premise that the Civil War battles were similar in scale and intensity to the Napoleonic battles of 50 years before and that we could thus lift intact most of the design structure from the already existing Napoleon at Waterloo game series of games. We felt that the Napoleon at Waterloo game system as it stood combined the elements of playability and realism we were seeking in this game series. Thus, the scale of the Napoleonic games (400 meters per hex, 1-2 hours per Game-Turn) and certain salient play features, such as Night Zones of Control, retreat and advance after combat, and sequential Player-Turns, were retained in the present game.

Yet the Civil War games could not be an exact copy of the Napoleonic designs. The Civil War battles did differ from Napoleonic battles in several important respects. First, and foremost, they were not decisive battles in the sense that Waterloo was.

The fact that a decisive battle of the Waterloo ilk did not happen was a tactical consequence of the general usage of the muzzle-loading, percussion-capped rifle, which had been invented and refined in the decades prior to the war. This weapon was generally much more effective in the Napoleonic flintlock musket; extending the firepower of the infantry in range and reliability. The first consequence was that cavalry or, rather, the traditional massed cavalry charge, was reduced to a battlefield relic. Whereas before a cavalry charge could usually break a deployed infantry line, now anything except the most tenuous skirmish line was proof against cavalry. This meant that infantry could deploy in lines and mixed columns and lines, ignoring the presence of cavalry as a mounted threat. The second consequence of the rifle was to reduce the effectiveness of artillery as an offensive weapon. Napoleon had used artillery aggressively, massing it just beyond musket range of the enemy's infantry and using canister to literally blow holes in enemy positions which could then be exploited by cavalry and reserves.

We incorporated one major innovation in the combat mechanics. That is Attack Effectiveness, which is presented as an optional rule. It was originally an organic part of the game, but was appendixed in the pursuit of simplicity. Players who use it will find that they have to deal with a new and very realistic element in their battle management: That of proper and timely employment of reserves. In the regular games, a Player can afford to commit his forces to broad frontal assaults, putting pressure all along the line in hopes that he will get lucky with a series of 1-1 and 2-1 attacks, which could yield him a geographical advantage to exploit. Attack Effectiveness reduces the utility of this tactic. A Player who fails to keep an uncommitted fresh reserve available will find himself, toward the end of a day of battle, with most of his army intact, but unable to attack and at the mercy of an opponent who has fresh troops.

At the same time, we changed the bombardment rules so that a Player could no longer use bombardment to allow his artillery to escape the consequences of being adjacent to an enemy unit.

We considered, for a while, switching artillery from bombarding on attack to bombarding in defensive support (adding its strength to some friendly defending unit) but decided not to, since we felt the defending player should rely not on the passive defense strength of his units, but on well conducted counterattacks to preserve a given line or position (for which bombarding artillery is invaluable).
Blue & Gray II

[15.0] REINFORCEMENTS

GENERAL RULE:
The Union Player, only, receives reinforcements according to the Reinforcement Chart. These reinforcements are placed on the edge of the map in the hex indicated. Reinforcements arrive during the Player’s Movement Phase of the Game-Turn indicated. If a reinforcement entry hex is blocked by an Enemy unit (not solely by an Enemy Zone of Control), the arriving units may not enter that hex until the hex becomes unblocked. The Union Player may enter his reinforcements onto the map at any time during his Movement Phase. The Union reinforcement units are not subject to the Union Movement Restrictions (Case 16.0) at any time during the game.

[15.1] RESTRICTIONS

[15.11] Each reinforcing unit spends one Movement Point to be placed on the entry hex. Units may exceed the stacking limitations when entering the map, as long as they conform to those restrictions at the end of the Movement Phase.

[15.12] Once a unit has entered the map, it may move and engage in combat freely, just as any other unit already present.

[15.2] REINFORCEMENT CHART

[16.0] EXITING THE MAP

[16.1] UNION PLAYER

[16.11] The Union Player can voluntarily have his units exit the map only through hexes 1501, 2001 and 2107, and then only if those hexes are not occupied or controlled by the Confederate Player’s units. The Union Player receives one Victory Point for each Combat Strength Point of his units so exited.

[16.12] Even though such units are not considered eliminated, they nonetheless may not return to the game. The Union Player cannot otherwise voluntarily have his units leave the map. Thus, any units
forced (by combat) to exit through these, or any other hexes, are considered eliminated.

16.2] CONFEDERATE PLAYER

16.21] The Confederate Player can voluntarily have his units exit the map through hexes 1501, 2001 and 2101 if these hexes are not occupied or controlled by the Union Player's units. The Confederate Player receives no Victory Points for units so exited, and such units cannot return to the game. Confederate units exiting the map through these hexes for any reason (even as a result of combat) are not considered eliminated.

16.22] During the first two Game-Turns, the Confederate Player may voluntarily exit a combined total of 20 units from the map at the Southern edge through hexes 2518 and/or 2514. [This simulates Jackson's flanking maneuver of May 2nd.]

16.23] Units exited as per Case 16.22 must later re-enter the map at the Western edge as follows: Units which exited on Turn One will return on Game-Turn Four; those which exited on Turn Two will return on Game-Turn Five (the Night Game-Turn).

16.24] Units re-enter the map at the Western edge anywhere between hexes 1027 and 1928, inclusive, paying the entrance cost of the first hex they are placed on.

16.25] The Confederate Player should visualize the re-entering units as a column of units entering the map from a chain of hexes off-map, of the same terrain-type as the entry hex. (For example, the first unit re-entering expends one Movement Point; the second unit expends two Movement Points, etc.) If there are more re-entering units scheduled to arrive than can physically be entered onto the map during a given Game-Turn, the unentered balance is simply brought back into play on the following Game-Turn.

16.26] These re-entering units are subject to the normal stacking limitations. Re-entering units may enter into Enemy Zones of Control; however, if they are then forced to retreat off the map, they are eliminated.

16.27] Units leaving the map by this route (the Southern map edge hexes) after Game-Turn Two are eliminated.

17.0] MOVEMENT RESTRICTIONS

17.1] MOVEMENT QUOTA

The Union Player may not move all his units. He may move only six units (of his choice) each Game-Turn. (There is no limitation, however, to the number of units which may attack.) There is no restriction on the number of units advancing and retreating as a result of combat. Union reinforcements arriving on Game-Turn Four and Five are not subject to or affected by this restriction at any time during the game. The Confederate Player has no movement restrictions.

17.2] AVERILL'S DIVISION

The units of Averill's Cavalry Division may not cross Ely's Ford until the Union Player rolls a "1" on the die. The die is rolled once for each Game-Turn. As soon as a "1" is rolled, both Averill units may cross (on that Turn or a following Turn). These units may not cross at any other Ferry hex.

18.0] DEMORALIZATION

Demoralization demonstrates the effect of extensive combat losses. (Players should not use the Attack Effectiveness Option, Case II.0, in Hooker and Lee.)

18.1] UNION PLAYER

If the Union Army suffers combat losses in excess of the following, it becomes demoralized: Before all 1 Corps units cross river, 47 Strength Points; after all 1 Corps units cross river, 58 Strength Points. Union losses must exceed these totals to bring about demoralization.

18.11] Demoralized units may move and attack normally; however, they may not advance after combat and they may not voluntarily attack at odds of less than 1-3.

18.12] The effect of demoralization is immediate; as soon as the Union Player exceeds his limit, the rest of his units become demoralized. If there are any further battles to be fought that Game-Turn, they are resolved in a demoralized state, with the exception that all combat at odds of less than 1-3 that have already been scheduled for that Game-Turn may be resolved.

18.13] Union reinforcements arriving on Game-Turn Four (Reynold's 1 Corps) may act to "rally" a demoralized army. (The Union reinforcements arriving on Game-Turn Five (Averill) may not rally Union units.) If all the reinforcement units of Reynolds' 1 Corps arrive, and Union losses are lower than 59 Strength Points, the Union Player's units are "rallied." Union reinforcements have no effect on rallying/demoralization until they are actually across the Rappahannock River. Rallied units are no longer considered demoralized.

18.2] CONFEDERATE PLAYER

If, at any time during the game, the Confederate Player suffers combat losses in excess of 52 Strength Points, his army becomes demoralized.

18.21] The effect of demoralization on the Confederate Army is the same as it is on the Union Army.

18.22] Confederate units may never be "rallied."

19.0] UNION STACKING RESTRICTION

GENERAL RULE:

Union units may not stack. Only one Union unit is allowed to occupy any one hex at the end of a given Phase. A Union unit may move through hexes containing other units, but may never end either the Movement Phase or the Combat Phase stacked with another unit. Confederate units may stack normally.

20.0] VICTORY CONDITIONS

GENERAL RULE:

Victory is determined by the accumulation of Victory Points. Victory Points are awarded, as play progresses, for the elimination of Enemy Combat Strength Points. Victory is also determined by the occupation of certain hexes.

PROCEDURE:

Each Player keeps track of the Victory Points that he has scored on a separate sheet of paper. These Victory Points are awarded for a variety of actions as detailed in the Victory Point Schedule (20.1). At the end of the game, the total number of Points is tallied for each Player, and the Player with the highest number of Points is awarded a victory.

20.1] VICTORY POINT SCHEDULE

The Confederate Player receives:

- 2 Victory Points for each Confederate Strength Point eliminated, and 10 Victory Points, each, for occupying hexes 0328, 0511 and/or 1501.
- The Union Player receives:

- 3 Victory Points for each Confederate Strength Point eliminated; and 1 Victory Point for each Union Strength Point exited voluntarily through hexes 1501, 2001 and/or 2101. He also receives 15 Victory Points for occupying hex 1501.

20.2] LEVELS OF VICTORY

Stated as a ratio of Confederate Victory Points to Union Victory Points:

CONFEDERATE DECISIVE VICTORY: 2 to 1 or greater.
CONFEDERATE SUBSTANTIVE VICTORY at least 1.5 to 1, but less than 2 to 1.
CONFEDERATE MARGINAL VICTORY greater than 1 to 1, but less than 1.5 to 1.
UNION MARGINAL VICTORY 1 to 1 or less, but greater than 1 to 1.5.
UNION SUBSTANTIVE VICTORY 1 to 1.5 or less, but greater than 1 to 2.
UNION DECISIVE VICTORY 1 to 2 or less.

20.3] EFFECTS OF DEMORALIZATION ON VICTORY LEVEL

If one side or the other is demoralized, but wins a victory, that Victory Level is dropped one level (a Substantive becomes a Marginal Victory). If both sides are demoralized, there is no effect.

21.0] THE GRAND CHANCELLORSVILLE OPTION

The Grand Chancellorville Option is available to owners of the games Hooker and Lee and Fredericksburg. The Option enables the Players to recreate the entire Chancellorville Campaign of April-May, 1863, with optional increases in complexity. Additional units, not used in Hooker and Lee, but provided in the counter mix, are used in the Grand Chancellorville Option.

PROCEDURE:

To provide a playing surface for Grand Chancellorville, abut the separate maps from Hooker and Lee and Fredericksburg to each other; the Western hexrow on the Fredericksburg map overlaps directly onto the Eastern hexrow on the Hooker and Lee map; e.g., Fredericksburg hex 1328 overlaps directly onto Hooker and Lee hex 1201. Do not use the Fredericksburg counters.

21.1] CHANGES TO TERRAIN RULES

All Blue & Gray Standard Rules are in effect. However, there are some changes to the normal, and special, terrain rules.

21.11] All Creek hexides on the Fredericksburg map, except the Canal, are considered Ford hexides. All River Ferry hexes (in Grand Chancellorville only) may be entered at a cost of two Movement Points, rather than three. Additionally, units may end their Movement Phase in a River Ferry hex. Units in River Ferry hexes have their Combat Strength halved when attacking and defending. Zones of Control extend into and out of after River Ferry hexes solely through the entry hexides of that hex. Artillery units may not bombard from a River Ferry hex.

21.12] Redoubts and pontoon bridges are treated as per the Fredericksburg Rules; i.e., units attacked by (adjacent or bombardng units) solely through redoubt hexides are tripped in defense; pontoon cost 1 Movement Point to enter.

21.2] EXCLUSIVE RULES

Neither games' Exclusive Rules are in effect, unless specifically stated.

21.3] GAME LENGTH AND PLAY SEQUENCE

21.31] Grand Chancellorville lasts 20 Game-Turns, from midnight April 29-30 to the end of
21.32 [The Confederate] Player-Turn is first in each Game-Turn; however, on Game-Turn One (Night, April 29-30), the Confederate Player may not move or attack.

21.4] INITIAL DEPLOYMENT

Hex numbers preceded by an "H" are on the Hooker and Lee map; those preceded by an "F" are on the Fredericksburg map. Hex numbers for each unit are listed first, followed by Strength and Type (in bold type). Unit designations are shown in parentheses.

21.41 UNION ARMY

21.42 CONFEDERATE ARMY

H1233: 5 (Mahon/Al), H1623: 4 (Popeny/A), F2027: 4 (Wright/A), F1927: 4a (Garrett/A), F1328: 5 (Wilcox/A), F0141: 3 (Perry/A), F0171: 4 (Wofford/M), F0914: 3a (Pendell), F1112: 5 (Barksdale/M), F1212: 3a (Alexnder), F1313: 4a (Cabell/M), F1313: 5 (Semmes/M), F1512: 6 (Kershaw/M), F1711: 5 (Hays/E), F1909: 5 (Hoke/E), F2006: 6 (Gordon/E), F2104: 2a (Andrews/E), F2202: 4 (Smith/E).

21.5] REINFORCEMENTS

All reinforcements enter the map in column formation; i.e., the first unit to enter the map pays 1 MP for the entry hex, the second unit pays 2 for the first entry hex, etc. The entry of reinforcements may be delayed at the whim of the Players, but they must enter where noted. Reinforcements may enter the map in Enemy ZOC's, but may not enter Enemy occupied hexes.

21.51 UNION ARMY

Apparent on Game-Turn One on hex F1301: 19 (1/D), 12 (2/D), 7 (3/D), 5a (I).

On hex H0128: 19 (1/V), 9 (2/V), 4a (V).

Apparent on Game-Turn Two on hex H1128 and/or F0128: 13 (1/XII), 16 (2/XII), 3x (XII), 4e (2/Plesntn), 3e (1/Plesntn).

Apparent on Game-Turn Four on hex H1128 and/or H0128: 9 (1/XI), 10 (3/XI), 8 (2/XI), 2a (XI).

Apparent on Game-Turn Five on hex H0128: 9 (3/V), 3a.

Apparent on Game-Turn Sixteen on hex 0128: 4e (1/Averill), 3e (2/Averill).

21.52 [CONFEDERATE ARMY

Apparent on Game-Turn Two on hex F2501: 4 (Heth/H), 4 (Thomas/H), 4 (Ramsey/R), 4 (Doles/R), 4 (Iveryson/R), 4a (Chickil), 3a (Walker/H), 2a (Carter/R), 2a (H/Jones/C), 5 (Colquitt/R), 5 (Rodes/R), 5 (Nichols/C), 5 (Jones/C), 5 (Paxton/C), 5 (Colston/C), 5 (McGowan/H), 5 (Archer/H), 5 (Pender/H), 5 (Lan/H).

Apparent on Game-Turn Eight on hex H1427, H1928, H2328, H1128, H1027 or H0128: 4e (1/Lee/S), 1a (Beccham/S).

Apparent on Game-Turn Nine on hex H1427, H1928, H2328, H1128, H1027 or H0128: 2x (2/Lee/S).

Apparent on Game-Turn Ten on hex H1427, H1928, H2328, H1128, H1027 or H0128: 3e (WHF/Lee/S).

22.0] GRAND CHANCELLORSVILLE SPECIAL RULES

22.1] UNION STACKING RESTRICTION

Union combat units may not stack. (See Section 19.0).

22.2] STRATEGIC MOVEMENT

Both Players have Strategic Movement capabilities, although they differ for each Player.

22.21 For the first five Turns of the game, for the Union Player only, all units moving in hexes north of the River, not including the ferry or pontoon hexes, may move by turn at twice the normal Movement Allowance (12 Movement Points), but may not enter Enemy ZOC's during a Turn in which they do so.

22.22 On Game-Turns Two and Three, only, any Confederate unit may move twice its normal Movement Allowance as long as it does not enter any Enemy Zones of Control. Confederate units that enter Enemy ZOC's may not use Strategic Movement on that particular Turn. Note that the hetex north of the River have no additional effect for Confederate units.

22.23 All cavalry units have Strategic Movement capabilities throughout the entire game. Cavalry units may move twice their normal rate on any Game-Turn in which they do not enter an Enemy Zone of Control. On any Turn in which a cavalry unit enters an Enemy ZOC, it may not use Strategic Movement; it moves at its normal rate of 6 MP. Note that the 1a "Brockham" (Confederate) is a horse artillery unit and is treated as cavalry, but it may not bombard or it uses Strategic Movement.

22.3] EXITING THE MAP

22.31] The Union Player may voluntarily exit units from the map through hex F2501 only. He receives one Victory Point for each Strength Point exited through this hex. These units may not return, but are considered eliminated for victory purposes. The Union Player may not voluntarily exit units from the map through any other hex; if forced to do so, units exiting any hex are eliminated.

22.32] The Confederate Player's units may not exit the map.

22.4] UNION COMMAND CONTROL [Optional Rule]

Corps designation is the final character in Unit designations. Starting with Game-Turn Seven, the Union Player has a Command Control Phase preceding his Movement Phase. During this Phase, the Union Player rolls the die for each Corps (I, II, III, V, X, etc.) on the board. On a roll of 1 or 2 of 3, all units in that particular Corps may move on that Turn. On a roll of 4, 5 or 6, no units in that Corps may move on that Turn. All cavalry units are considered as one individual Corps, but may move on a throw of 1, 2, 3 or 4. The Reserve Artillery unit may be considered as belonging to any Corps to which it is designated at the beginning of any particular Command Control Phase, except the Cavalry Corps.

22.5] LEADERS [Optional Rule]

Players may use the Leader counters provided to affect combat and Victory Points. Leader counters with one star are Confederate Divisional and Union Corps commanders. Leaders with more than one star are Army (Union and Confederate) and Corps (Confederate) commanders. It will be noted that the Union has no cavalry commander; General Stoneman was off beating the bushes somewhere and wasn't available. It is recommended that Players use the Attack Effectiveness Option (Section 11.0) with this rule.

22.51 Leaders have no combat value by themselves. They have a Movement Allowance of 12 and may use Strategic Movement to double that.

22.52 Leader counters have no stacking limitations, per se, and may ignore the stacking restrictions of combat units; i.e., there may be more than one leader in a particular hex, over and above the combat units. Only one leader, the highest in rank, will affect combat. The highest leader must be used.

22.53 One-Star Leaders may stack only with units of their command. (Exception: Any One-Star Leader may stack in any hex where there is a higher-ranking Leader present.) For the Union, this means that Corps Commanders may stack only with units from their Corps. Confederate Divisional Commanders must do likewise; the final abbreviation letter corresponds to the first letter of that Division's Commander's name; e.g., Posey is in Anderson's Division.

22.54] If all units within a particular command have been eliminated, the commander is removed from play.

22.55 Leaders have no combat value; if alone in a hex they do not impede the movement of any Enemy combat units, who may move through them as if they did not exist. If such an "overrun" occurs, the Leader is considered destroyed.

Unaccompanied Leaders are not affected by artillery barrage.

22.56 Leaders affect combat as follows: any unit that suffers a combat result of Ao does not lose Attack Effectiveness if stacked with a leader, i.e., all Leaders negate the loss of Attack Effectiveness for any unit with which they are stacked, for that particular combat result. Exception: Hooker does not produce this benefit! He has no effect on Attack Effectiveness. In addition, any Leader with more than one star adds one Strength Point to any non-artillery unit or units with which he is stacked. Only one Leader may affect units in a stack.

22.57 If a Leader is stacked with a combat unit that receives a combat result that leads to that unit's elimination, there is a chance that the Leader is killed. Roll a die for each Leader present with the destroyed combat unit. A "1" means the Leader is dead. Any other result means that the Leader is moved immediately to the nearest unit of his command, or to the nearest Leader.

22.58 Opposing Players receive twice the number of stars on the counters for eliminating a commander, e.g., if Jackson is killed, the Union would receive six Victory Points.

22.59 Leaders are deployed with any unit in their commands — whether on board or as reinforcements. Hooker and Lee start anywhere on the board, or with Game-Turn One reinforcements; Jackson arrives with the Game-Turn Two Confederate reinforcements; Stuart arrives with any reinforcing Confederate cavalry unit on May 1st.

22.6] VICTORY CONDITIONS

22.61 VICTORY POINT SCHEDULE

Points Awarded for Occupation of Hexes at the End of the Game:

F2401 = 25VP; F1326 = 5VP; F0825 = 5VP; F2027 = 5VP; H1928 = 15VP; H0328 = 5VP.

The Union Player Receives:

1. 1 Victory Point for each Strength Point exited through F2501, as long as he can trace a Line of Command to another unit which consists of hexes unobstructed by Enemy units or ZOC's from F2501 to any hex North of the River through a crossable hex (bridge, ferry, etc.). Friendly units do
not negate Enemy ZOCs. If these units cannot trace a Line of Communications they are considered eliminated.

2. 2 Victory Points for every Confederate Strength Point eliminated.

3. 2 Victory Points for every star of a commander eliminated.

The Confederate Player Receives:
1. 2 Victory Points for every Union Strength Point eliminated.
2. 2 Victory Points for every star of a commander eliminated.

[22.62] LEVELS OF VICTORY
The Levels of Victory are the same as in Case 20.2.

Attacks executed at greater than 6-1 are treated as 6-1; attacks executed at worse than 1-5 are treated as 1-5.

[7.6] EXPLANATION OF COMBAT RESULTS

Ae = Attacker Eliminated. All Attacking units are eliminated (remove from the map).
De = Defender Eliminated. All Defending units are eliminated.
Ex = Exchange. All Defending units are eliminated. The Attacking Player must eliminate Attacking units whose total, printed (face value) Combat Strength at least equals the total printed Combat Strengths of the eliminated Defending units. Only units which participated in a particular attack may be so eliminated.
Ar = Attacker Retreats. All Attacking units must retreat one hex (see 7.7).
Dr = Defender Retreats. All Defending units must retreat one hex.
