

Lee at Gettysburg

The Confederate Summer Offensives, 1862 and 1863

- Step Reduction of Combat Losses
- Covers the Entire Antietam and Gettysburg Campaigns
- Hidden Movement and Cavalry Probes

Lee invaded the North twice. In 1862, he reached Antietam and fought the bloodiest single day in the Civil War. The following year his army was crippled in the War's deadliest contest at Gettysburg. Lee only gambled twice, but that was once too much. After Gettysburg, Lee was on his way home for good.

Lee at Gettysburg is a strategic simulation of the two Confederate invasions of the North. The 22" x 28" color mapsheet encompasses the Virginia, Maryland, and Pennsylvania territory which Lee penetrated in his two summer offensives. Historically designated Union and Confederate units take combat losses by "step-reduction" and give battle according to a

new, simpler and more accurate Combat Results Table than those used in *The Wilderness Campaign* and *The Franco-Prussian War* simulations. In two twenty-turn games, both the Antietam (August-September, 1862), and the Gettysburg (June-July, 1863) Campaigns are simulated in their entirety. Four Antietam scenarios cover the march that led to Second Bull Run and Sharpsburg and explore the possibility of Union reinforcement from the Peninsula and the Confederate's bringing the Charleston Garrison northward. Besides the historical "Gettysburg" scenario, two scenarios depicting the transfer of the Union's Western Theater leaders to the East and Grant's reorganization of the Army of the Potomac are presented.

Lee at Gettysburg incorporates refined rules covering limited intelligence, cavalry reconnaissance, leadership, supply, and rail movement, with special attention to a Confederate crossing of the Potomac River and the rebel desertion rate, and Union militia and intelligence advantages that accompany such Confederate boldness.

Since we've been designing games, requests for a simulation of The Gettysburg Campaign have been stockpiling in our letter files. *Lee at Gettysburg* was designed to reward your patience.

Lee at Gettysburg is available (boxed) from Simulations for \$6.00.
